APPENDIX- CLEAN VERSION OF AMENDMENTS TO THE CLAIMS

1-24. (Cancelled)

25. (Currently Amended) A printed circuit board design instruction support device that

supports printed circuit board design between a circuit design and a printed circuit board design,

said device comprising:

means for reading a circuit diagram designed by the circuit design;

means for storing design instruction information regarding the printed circuit board

design and keywords, which are associated with said design instruction information and set

corresponding to the type of items included in said, circuit diagram; and

means for extracting keywords corresponding to the type of items included in the read

circuit diagram and displaying design instruction information associated with the extracted

keywords, when the circuit diagram is read by said reading means.

26. (Currently Amended) The printed circuit board design instruction support device

according to claim 25, wherein

said displaying means displays keywords corresponding to the type of items included in

the read circuit diagram when the circuit diagram is read by said reading means.

27. (Canceled)

28. (Currently Amended) The printed circuit board design instruction support device

according to claim 25, said device comprising:

means for extracting damping resistances and target ICs of the resistances from the

circuit diagram read said reading means, by extracting resistances, which have an attribute of

series connection, from the circuit diagram read by said reading means and discriminating

whether or not items connected to the pins of the extracted resistances are ICs.

29. (Currently Amended) The printed circuit board design instruction support device

according to claim 25, said device comprising:

means for extracting bypass capacitors and target ICs of the capacitors from the circuit

diagram read by said reading means, by extracting capacitors, which are connected to a power

source and ground, from the circuit diagram read by said reading means and discriminating

whether or not the extracted capacitors are capacitors connected to IC toward the power source

side.

30. (Currently Amended) The printed circuit board design instruction support device

according to claim 29, wherein

said extraction means when the extracted capacitors are connected to a plurality of ICs,

extracts an IC having the shortest connecting distance out of the ICs.

31. (Currently Amended) The printed circuit board design instruction support device

according to claim 29, wherein

20

Reply to Office Action of June 16, 2008

said extraction means extracts the bypass capacitors, the target ICs of the capacitors, and

Docket No.: 1794-0182PUS1

the information of wiring connecting the both parts from the circuit diagram read by said reading

means.

32. (Currently Amended) The printed circuit board design instruction support device

according to claim 26, said device comprising:

means for extracting items included in the circuit diagram read by said reading means;

and

means for associating items that were extracted by said extraction means with said design

instruction information via said keywords, wherein

said display means displays the items associated by said association means.

33. (Currently Amended) The printed circuit board design instruction support device

according to claim 32, wherein

said reading means reads a printed circuit board diagram designed by the printed circuit

board design, said device comprising:

means for selecting items or keywords displayed by said display means; and

means for highlighting items on the printed circuit board diagram read by said reading

means, which correspond to items selected by said selection means, when the items are selected

by said selection means, and highlighting items associated with the keywords on said printed

circuit board diagram read by said reading means, which corresponds to keywords selected by

said selection means, when keywords are selected by said selection means.

Application No. 10/575,758 Amendment dated September 16, 2008 Reply to Office Action of June 16, 2008

34. (Currently Amended) The printed circuit board design instruction support device

according to claim 32, said device comprising:

means for selecting items or keywords displayed by said display means; and

means for highlighting items on said circuit diagram read by said reading means, which

correspond to items selected by said selection means, when the items are selected by said

selection means, and highlighting items associated with keywords on said circuit diagram read

by said reading means, which correspond to keywords selected by said selection means, when

the keywords are selected by said selection means.

35. (Currently Amended) The printed circuit board design instruction support device

according to any one of claims 33 and 34, said device comprising:

means for executing macro that performs control such that said display means displays

the entire circuit diagram read by said reading means before items are highlighted by said

highlight means, macro that performs control such that said display means displays highlighted

items in an enlarged manner after the items were highlighted by said highlight means, or macro

that performs control such that said display means displays the entire circuit diagram read by

said reading means before items are highlighted by said highlight means and said display means

displays highlighted items in an enlarged manner after the items were highlighted by said

highlight means.

Reply to Office Action of June 16, 2008

36. (Currently Amended) The printed circuit board design instruction support device

according to any one of claims 25, 26, 28, 29, 30, 31, 32, 33 and 34, said device comprising:

means for managing whether or not a printed circuit board design was performed

according to said design instruction information, by accepting the input of a result in which said

design instruction information was reflected on the printed circuit board design and accepting an

authorization to said result.

37-41. (Canceled)

42. (Currently Amended) A program for allowing a computer to function as the printed

circuit board design instruction support device according to any one of claims 25, 26, 28, 29, 30,

31, 32, 33 and 34.

43. (Previously Presented) A program for allowing a computer to function as the printed

circuit board design instruction support device according to claim 35.

44. (Currently Amended) A printed circuit board design instruction support method in which

printed circuit board design is supported between a circuit design and a printed circuit board

design, said method comprising the step of:

reading a circuit diagram designed by the circuit design;

Application No. 10/575,758 Amendment dated September 16, 2008 Reply to Office Action of June 16, 2008

storing design instruction information regarding the printed circuit board design and keywords, which are associated with said design instruction information and set corresponding to the type of items included in said circuit diagram; and

extracting keywords corresponding to the type of items included in the read circuit design and displaying design instruction information associated with the extracted keywords, when the circuit design is read by said reading means.

- 45. (Currently Amended) A program for allowing a computer to function as the printed circuit board design instruction support device according to claim 44.
- 46. (Previously Presented) A computer-readable recording medium recording the program according to claim 42.
